

DIY Worm Bin

An inexpensive way to use your food waste to feed worms and in turn they will provide nutrient rich compost for gardens or indoor plants!

Materials Needed:

- Two plastic containers with lids
- Paper: newspaper, junk mail, old bills, non-glossy
- Food scraps and organic material
- Worms: Red wigglers

Steps to prepre bin:

6. Create holes at the top and bottom of your bin including the top lid
5. Shred or tear paper pieces and soak pieces in a small water bowl.
 - a. Paper should be damp not dripping
4. Place half shredded and half dry shredded paper into your container
 - a. Container should be about 1/3 filled
3. Add about 3-4 cups of soil over your shredded paper
2. Add in your worms!
 - a. Let your bin sit in sunlight for a little to allow the worms to burrow
1. Place in food scraps!
 - a. Place food scraps on top of the soil
 - b. Food scraps should be placed under a layer of damp paper scraps
 - c. Food scraps include: cores, peels, egg shells
